# HYBRIDISING NOTES

There was a few spare pages in this season's catalogue so we thought we would share with you some seedlings that had their maiden bloom in the spring of 2018. Please note that none of the Iris on the following pages are for sale.

**F44-2**

**Colours of the Wind X**

**Go Loco (2019)**

**F44-2: (Colours of the Wind X Go Loco)** Very fun lined pattern Iris. Gorgeous form with wide overlapping falls and ruffles. Stunning pattern that is set off by the bright beards and apricot hafts.

**F21-1: (Volcanic Glow X Wedding Night)** Coming from our line to darken the luminata pattern comes this intriguing beauty. A luminata-plicata in a very odd colour. Not quite what we were expecting but stunning nonetheless.

**Volcanic Glow** (left) has proven time and time again that it is a wonderful parent. Passing on amazing plant habits like growth and stems.

**X**

**Wedding Night** (left) has been a very difficult parent for us. It rarely sets pods and often does not give viable pollen. Hopefully the progeny we get out of it does not have this problem.

**Blyth A50-2: (Frostfall x R41-4)** The result of a cross between a self and amoena plicata. You can definitely see this parents influence in its child.

**A50-2**

**Volcanic Glow** shows its talent yet again in this seedling. Hopefully this cross will lead to many different luminata patterns!

**Volcanic Glow**

**F67-1: (Blyth A50-2:(Frostfall x R41-4):(P157-1:(N275-1:(L280-1: (G75-A:(E99-1:(B132-2: Holiday Lover x Love Comes) x Bygone Era) x (E158-2: (B202-1: Affaire x (Z55-3: (X108-2 x X108-10: Chocolate Vanilla sibs) x (B164-1: Chocolate Vanilla x Electrique))) x (G63-G: Mandarin Morning Sib) x (L133-1: I'm Dreaming sib) x (O228-4: (L133-7: I'm Dreaming sib) x (L304-1: Platinum Class sib) X Volcanic Glow)**

**F72-2:(Secret Status X V321-1:(Raise Your Glass sib))** One of Bailey's favourite to have its maiden bloom.

**Secret Status**

**X**

**V321-1**

**F109-1:(Variegated Wonder X Inner Darkness)** Work continues to broaden the colours and patterns in Iris with variegated foliage. This seedling will hopefully lead to a black and white plicata with variegated foliage.

**Variegated Wonder**

**X**

**Inner Darkness**

**F98-1**

**F98-1:(Georgette Silk X Read Between the Lines)** A stunning result from two great parents. The only seedling to germinate and bloom, needless to say the cross was repeated!

**X**

**F98-1**

# SEEKING THE PERFECT Flat CONTINUED

Spring of 2018 did not disappoint with the quality of the first time bloom seedlings being very high.

Work still continues on the flat formed Bearded Iris. It has been amazing to see how quickly good results have been coming out of our flat breeding line. From what we can gather, flat form is almost certainly a recessive trait. Meaning that in order for it to show up in a seedling, flat form must be in both the pod and pollen parent. This does not mean however that both parents need to be flat. This information is extremely useful if you are interested in breeding flats for yourself. Some of the results are shown below, an all round great year for flats!

F32-1

Chaos Theory  
X

New Perspective

**F32-1: (Chaos Theory X New Perspective)** A stunning flat coming from two flat parents. It was saved for obviously being flat and its great growth habits and stem. We will be testing out its fertility this next coming Spring. 'Chaos Theory' has proven to be a reliable and fertile parent. As mentioned in last years catalogue it can be used as both pod and pollen parent. Although we haven't seen anything from it as yet being used as a pollen parent we are sure it will be equally as good. 'New Perspective' has proven to be a very difficult parent. It's pod sterile and reluctantly gives pollen. There are many more seedlings to bloom in this cross which should bloom this coming Spring.

F74-1

Chaos Theory  
X

Fiasco

**F74-1: (Chaos Theory X Fiasco)** The first of two seedlings to bloom in this cross. It did not disappoint! A consistent flat that has six falls and six beards on all blooms. Amazing branching with 9 buds on a stem. On the shorter side coming in at around 34". Excuse the slightly damaged boom in the photo but I couldn't help myself and had to start unfurling it before it was ready. Unfortunately I was unable to get any pods to set on it and it had no usable pollen. Hopefully I can get something to set using it as either pod or pollen parent this coming Spring.

F74-2

Chaos Theory  
X

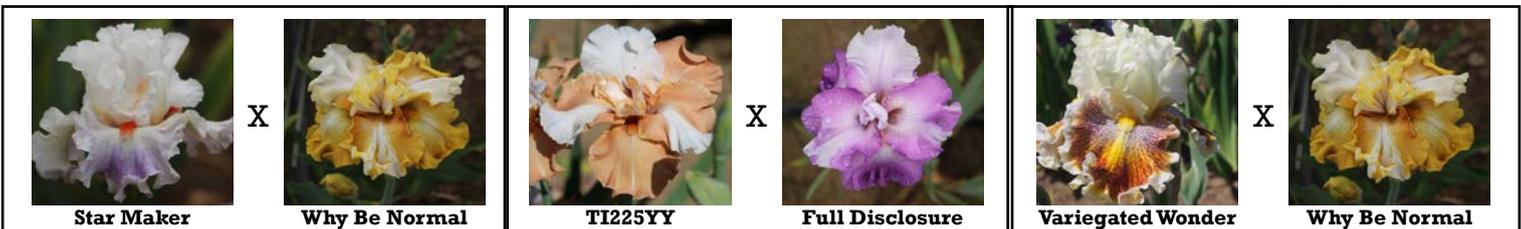

Fiasco

**F74-2: (Chaos Theory X Fiasco)** The second of the only two seedlings in the cross. Again, wonderful stems with a high bud count, a bit taller at around 38". Unfortunately it was very inconsistent with most blooms not staying flat. The photo shown is one of the better blooms that we seen. If it proves to be too inconsistent it will more than likely get the chop. Which is unfortunate because we like the bloom on this one better than it's sibling. It is a pattern that has never been seen before in a flat formed Iris. Hopefully it will sort itself out in Spring.

## INTO THE FUTURE.....

Here are some crosses we made during 2018 to further our goal. Some we will see bloom during Spring 2020!
